

Electric Counterbalance Masts

Hyster offers the following different Electric Counterbalanced Forklifts:

The **E25-40ZS, E45-65Z and the E70-120Z AC Power series lift trucks** from Hyster are powered by a 36- or 48-volt AC system. Their load-carrying capacity ranges from 2,500 to 12,000 lbs.

The **J40-65Z counterbalanced lift truck** from Hyster has pneumatic tires which reduce vibrations, affording a smooth and comfortable ride. The truck also has AC motors which do not produce any noise.

The **J30-40ZT series of trucks** have a three-wheel configuration. This configuration makes a tighter turning radius possible, increasing the strength of maneuverability. This truck is therefore quite useful in contexts where the space is limited and the loading bays are congested. The dual steer wheels provide a smoother and more stable ride.

The **Hyster StanDrive E30-40HSD** series has load-bearing capacity of 3,000 to 4,000 pounds. The operator compartment is ergonomically designed. Operator controls are positioned to allow either a side stance or a 45-degree stance for maximum efficiency, visibility and custom comfort.
